

CONCLUSIONS

Though initially expensive this method of recording cave entrances is very effective and is really the only form of "photo tagging" suitable to North Queensland tower karst areas. It also provides a "bird's eye" view and often gives the cave explorer clues of where to look for new caves.

COMPARISON OF NORTH QUEENSLAND TROPICAL KARST AREAS

Tom W.L.Robinson

ABSTRACT

Comparisons between the Chillagoe, Mitchell-Palmer, Wallace Creek and Mt. Consider areas. Factors contributing to the evolution of the present day landscape.
