

Some Australian Caves and Karst

Abrakurrie: An exceptionally large chamber in a cave on the Nullarbor Plain.

Brooking Gorge: A gorge in the limestones of the West Kimberly, Western Australia.

Chillagoe: The jagged towerkarst of the Chillagoe Area, Northern Queensland

Gypsum: Gypsum crystals on the walls of Mullamullang Cave, Nullarbor Plain.

Menyous Gap: Aboriginal paintings from a cave in Menyous Gap, West Kimberley

Shiskebab: Aragonite speleothems in Shiskabab Cave, Mole Creek, Tasmania.

Splash Bowl: A cave ring or splash bowl in Spring Cave, Chillagoe, North Queensland.

Sucker pads: A speleothem from Carpentaria Cave, Chillagoe, North Queensland. Origin of these forms is uncertain, but at Chillagoe, appears to result from erosion of floor below a short column.

Tunnel Creek: This is a cave that runs through the Napier Range of the West Kimberley. One can also see a former higher-level course above the cave. More importantly, the range comprises a Devonian reef that is essentially unchanged, other than being exposed by the lowering of sea level.

Yallingup: A shawl that has been fed by crystallisation from one side, then from the other.

Nullarbor: A view of the treeless surface of the plain photographed near Murrawijinee Cave.

Ida bay: A ball of moonmilk on a straw stalactite in Exit Cave, Ida Bay, Tasmania.
