

Submission from Mr John Boulton, 5 St Pierre Court, Currambine 6028

We can improve WA sustainability by building a windmill generator at the Beldon Sewerage Treatment Plant to turn its liquid output into steam. This can then be applied to the methane collected at the Tamala Park Rubbish Tip to make Hydrogen and Carbonmonoxide gases – which can be sold! $\text{CH}_4 + \text{H}_2\text{O} \rightarrow \text{CO} + 3\text{H}_2$
